Posters

1	Bioinformatic analysis of the antibody repertoire induced in young and old donors in response to yellow fever vaccination *Anna Obraztsova*
2	Distinct features of the T cell receptor repertoire in human regulatory T-cells *Sofya Kasatskaya*
3	In silico prediction of new minor histocompatibility antigens. *Dmitry Malko*
4	Comparative analysis of V-D-J rearrangement junction sequences that encode T-cell receptors recognizing similar and distinct antigens *Aleksey Eliseev*
5	Convolutional architecture for prediction of peptide-MHC binding affinities *Rudolph Layko*
6	Deep learning model for prediction of probability for thymic selection for T-cell receptor sequences *Sophya Tolstoukhova*
7	Rational design of catalytic antibody A.17 *Valentina Maslova*
8	The effect of SNPs on gene regulation and metabolic processes in autism *Polina Shichkova*
9	Validation of novel hereditary cancer genes identified upon exome sequencing: a focus on primer design *Ilya Bizin*

10	Accurate HIV-1 population diversity analysis using deep sequencing with Primer ID approach *Aleksandra Vasileva*
11	Workflow for replicable Sanger sequencing of NGS-derived mutations in clinical application *Marina Orlova*
12	Human SNP associations with genetically determined disorders *Polina Avdyunina*
13	Identification of new potential targets for treatment of coinciding asthma and hypertension *Olga Zolotareva*
14	Analysis of mutations associated with idiopathic restrictive cardiomyopathy *Svetlana Tarnovskaya*
15	Differential expression meta-analysis may help to reveal the basis of energy metabolic deficiency common to neurodegenerative diseases *Alexander Osypov*
16	The interplay between Spliceosomal Components and Cellular Stress mediated by chemo- and radiotherapy *Ksenia Anufrieva*
17	Interpreting genomes and transcriptomes of patients with rare genetic diseases *Sergey Naumenko*
18	Construction of regulatory networks by integrating gene expression, promoter methylation and copy number alteration data for prostate cancer *Rinat Sultanov*

19	IGNG1-IGNG3 locus, its possible role in the multiple sclerosis, and biases SNP allele frequencies for europeoid and non-europeoid populations *Marina Fridman*
20	FLOating Window Projective Separator (FloWPS): a method of data transfer for expression-based features from cell lines to cancer patients during SVM-based prediction of drug efficiency in personalized medicine *Nicolas Borisov*
21	Detailing the Quaternary structure of the virus using tritium planigraphy *Alexsey Dolgov*
22	Cure for primary dopaminergic midbrain neurons by GPR139 agonists using structure based virtual screening and molecular dynamics simulation *Aman Chandra Kaushik*
23	Sequence and structure features of GroE substrates orthologs in *Mycoplasma* *Marina Parr*
24	Spectrum of proline-specific peptidases in dikarya fungi *Nikita Alkin*
25	Gene Ontology terms in scoring of docked protein models *Anna Hadarovich*
26	Investigating residue coevolution in proteins from a structural perspective *Alexey Morgunov*
27	Proteoforms scouting in HepG2 cell line *Olga Kiseleva*

28	Applying deep-learning techniques to identification of pathogenic amino acid substitutions *Ivan Reveguk*
29	Model of multisite tau protein phosphorylation for prediction of sensitivity to therapeutic interventions. *Alexander Stepanov*
30	Cofactor-binding studies of the Williams Syndrome related methyltransferase WBSCR27 in solution *Sofia Mariasina*
31	Molecular modeling of catalytic and lectin domains in neuraminidase A from *Streptococcus pneumoniae* *Yana Sharapova*
32	Allosteric inhibitor Doramapimod can bind to human p38α MAP Kinase even when the activation loop is in the DFG-in state *Dmitry Suplatov*
33	*Pseudomonas aeruginosa* phage EL chaperonin and a proposed model of its folding cycle. *Natalia V. Sernova*
34	QASDOM: a meta-server for scoring, analysis and ranking of protein-protein docking models *Anastasia Anashkina*
35	Identification of amino acid residues affecting on the specificity of interaction of protein kinases and small molecular inhibitors *Dmitry Karasev*
36	Poxviral chemokine-binding proteins: theoretical study of structure and function evolution *Denis Antonets*
37	Optimums of the environmental conditions affect amyloidogenic properties of prokaryotic proteomes *Kirill S Antonets*

38	Identification of amyloid-forming proteins in the *Escherichia coli* proteome *A.O. Kosolapova*
39	Descriptive analysis of *Arabidopsis thaliana L.* protein-protein interaction network: revealing of key members. *Sergey Pesyak*
40	Evolutionary genomics of antibiotic resistance *Semen Leyn*
41	Identification of bacteria transcription factor targets by machine learning *Irina Garanina*
42	Evolution of *Burkholderia spp* *Olga Bochkareva*
43	The Dps bacterial nucleoid protein is associated with sugar metabolism *Tatiana Bessonova*
44	Diversity of the HrpF/NolX/PopF protein in plant pathogenic bacteria *Aleksandr Ignatov*
45	Lateral transfer of restriction-modification systems and their components *Andrei Alexeevski*
46	Avoidance of restriction-modification systems sites in the metagenome of Antarctic Deep Lake shows interaction of species in the metagenomic community *Anna Ershova*
47	Genomic reconstruction of metabolic pathways for the utilization of carbohydrates in the human intestinal microbiota *Arthur Murtazin*

48	Metabolic exchange by essential vitamins in the human intestinal microbiota *Dmitry Rodionov*
49	Inference of phenotypes for amino acid metabolism in human gut microbiome using subsystems approach *German Ashniev*
50	Shotgun sequencing based detection of microbial community shifts during multi-step electrogenic bacteria selection *Larisa Kiseleva*
51	H-NS nuceloid protein binds to the oppA-oppB intergenic region of the *E. coli* oppABCDF operon and controls oppB expression. *Nataliia Sukharicheva*
52	Avoidance of recognition sites of restriction-modification systems as bacteriophage anti-restriction strategy *Ivan Rusinov*
53	Antisense transcription may contribute to a fine-tuned expression of sugar regulators in *Escherichia coli* *Nataliya Markelova*
54	Comparative analysis of non-local events in strain evolution within prokaryotic species *Andrei Alexeevski*
55	*Brucella* and *Bartonella* nucleotide pangenome comparative analysis *Alexandra Simonova*
56	Machine learning approaches in metagenomic sequencing analysis related to human oral microbiota composition associated with periodontitis *Yaw-Ling Lin*

57	RNA-DNA interactions in chromatin *Aleksandra Galitsyna*
58	Alteration of the chromatin structure in response to lamin depletion *Sergey Starikov*
59	Epigenome marks interaction defines chromatin compartments *Elena Stavrovskaya*
60	Dissecting epigenetic effects of Polycomb-group proteins in epidermal self-renewal and differentiation *Vasily Zubov*
61	Integrative modelling methods for understanding nucleosome dynamics. *Grigoriy Armeev*
62	Characterization of genes encoding target enzymes related in amino acid biosynthesis and herbicide resistance *Jung-Sup Kim*
63	KrATER: K-mer Analysis Tool Easy to Run *Sergei Kliver*
64	Exon-Intron Structure Database: a tool for intron analysis *Irina Poverennaya*
65	Dual coding regions prediction *Kseniya Petrova*
66	New version of sleeping chironomid's genome assembly using Illumina and PacBio data *Olga Kozlova*
67	CAGE application for avian embryogenesis *Ruslan Deviatiiarov*

68	CpG traffic lights are markers of regulatory regions in humans *Anna V. Lioznova*
69	Long-term space flight mediated changes in promoter landscape in Zebrafish (*Danio rerio*) tissues. *Alexander Cherkasov*
70	Novel ChIP-Seq simulation software (isChIP) for data analysis optimization *Yuriy Orlov*
71	Changes in mutational processes and patterns of mutations during cancer development *Mariia Andrianova*
72	Features of miR-1322 binding sites in the coding area of mRNA orthologic genes *Dana Aisina*
73	Context-dependent selection of upstream start codons in Homo sapiens lineage *Svetlana Iarovenko*
74	Molecular adaptations of subterranean rodents to underground lifestyle *Olga Bondareva*
75	Negative selection in *Drosophila melanogaster* missense alleles *Nadezhda Potapova*
76	The analysis of upstream open reading frame using comparative genetics. *Kirill Prosvirov*
77	Regression analysis for automated detection of horizontal gene transfer *Alexander Panchin*

78	Exact correspondence between walks in nucleotide and protein sequence spaces *Dmitry Ivankov*
79	Finding multi-dimensional epistasis in high-throughput experimental data at the level of individual genotypes *Dmitry Ivankov*
80	SELVa: Simulator of Evolution with Landscape Variation *Elena Nabieva*
81	Evidence of balansing selection in parallel evolution of closely related gammarus species genomes *Valentina Burskaia*
82	The signatures of recombination and gene conversion in the bdelloid rotifer *Adineta vaga* *Olga A. Vakhrusheva*
83	Parallel adaptation to the freshwater in a number of independent White Sea populations of threespine sticklebacks *Nadezhda Terekhanova*
84	The Evolutionary Moulding in plant-microbial symbiosis: coevolution of signal transduction systems *Anna Igolkina*
85	Causes of single position fitness landscape changes *Anastasia Stolyarova*
86	Accumulation of mutations in experimental evolution of basidiomycete fungus *Schizophyllum commune* *Aleksandra Bezmenova*
87	Structural dynamics of Interaction between human telomeric DNA G-quadruplex 21-mer and naphthalene diimide compound MM4 *Christian Solis-Calero*

88	Comparison small nucleic acids derivatives hybridization parameters obtained by molecular dynamics and experimentally *Victor Golyshev*
89	RNA triplexes within the known RNA 3D structures *Eugene Baulin*
90	Short stems in RNA secondary structure *Eugene Baulin*
91	Detection of signal beyond secondary structure from SHAPE experiment *Alexandra Pogorelskaya*
92	Influence of nucleotide sequence on conformational flexibility of the RNA dangling ends in the complexes with DNA: molecular dynamics studies *Alexander Lomzov*
93	SMARTIV: a novel method for RNA sequence and structure motif discovery from in-vivo binding data *Maya Polishchuk*
94	DEPPDB v.3 and its use to study electrostatic and other physical properties of genome DNA and its elements relevant to their biologycal functions *Alexander Osypov*
95	Ribosome drop-off rate in *E. coli* depends on mRNA properties *Zoe Chervontseva*
96	Role of electrostatics in transcription regulation in prokaryotes *Alexander Osypov*
97	Codons and amino acids biases around transcription factors binding sites are due to their electrostatics *Alexander Osypov*

98	Fast identification of statistically significant lncRNA-RNA interactions in a transcriptome-wide search *Ivan Antonov*
99	Approaches to building spatio-temporal models of splicing regulation that include RNA structure *Dmitry Pervouchine*
100	reaBuilding a pipeline for analysis of short-d RNA-seq data and natural transcriptomic variation in *Caenorhabditis elegans* *Cristian Riccio*
101	Developmental trajectory of liver stem/progenitor cells at single-cell resolution *Xianbin Su*
102	Discovery of novel cell-penetrating antimicrobial peptides by transcriptome deep analysis *Ekaterina Grafskaia*
103	Transcriptome analysis of pectobacteria-infected tobacco plants *Rim Gubaev*
104	Modeling of components of desiccation stress in anhydrobiotic cells *Alexander Nesmelov*
105	Tissue-specific transcriptional profile in the edible dormice is strongly affected by hibernation *Guzel Gazizova*
106	De novo transcriptome analysis of two early developmental stages of shiitake mushroom *Lubov Gapa*
107	Gene expression profiling in peripheral blood mononuclear cells reveals dependency on multiple sclerosis activity *Alexander Abramov*

108	RNAcentral: progress in the development of the non-coding RNA sequence Ddtabase *Boris Burkov*
109	Near single-cell transcriptomics analysis of differential expression in *Helix lucorum* statocysts under microgravity *Alexander Osypov*
110	Using de novo transcriptome for identification genes involved in cryotolerance in the turtle leech *Ozobranchus jantseanus* *Svetlana Kuznecova*
111	Genome under extreme desiccation: shifting transcription initiation regions in anhydrobiotic cell line *Elena Minkina*
112	Comparative analysis of PR gene expression in tomato inoculated with rhizobacterial Lipopolysaccharides against *Fusarium oxysporum f. sp. lycopersici* *Meenu Saraf*
113	Identification and characterization of HPV-host fusion transcripts in HNSCCs *Lada Koneva*
114	Associations between alternative polyadenylation and RNA secondary structure *Danila Bredikhin*
115	Differential alternative splicing by RNA-seq data in brain areas of laboratory rats with aggressive behavior *Yuriy Orlov*
116	Transcriptome profiling of primary glioma cell cultures *Nataly Gubanova*

117	Phylogenetic analyses of sugarcane cultivars for sugar content and early maturation using simple sequence repeat markers *Thangadurai Devarajan*
118	Genomic selection of superior Nili Ravi buffalo bull for increasing milk production in Pakistan *Saher Islam*
119	Advanced parser for biomedical texts *Anton Karazeev*
120	A multi-scale model of cellular morphodynamics *Siarhei Hladyshau*
121	Using machine learning approach to improve base calling in next generation sequencing data *Denis Antonets*
122	Ion channels in defecation motor program in nematode *Heterorhabditis megidis* *Yuri Panchin*
123	*Aurelia japonica*: molecular and chromosomal evidence *Anastasiia Kotova*
124	Distinguishing highly and lowly active CRISPR/Cas9 sgRNA via Inception-based Deep Convolutional Neural Network *Bogdan Kirillov*
125	Scaling of the active transport systems in oocyte: 3D agent-based simulations *Marat Sabirov*
126	DNA sequence complexity measures and analysis of short sequencing reads *Irina Abnizova*

127	A new method of evaluating genome assemblies based on kmers frequencies *Kirill Romanenkov*
128	Evolution and systematics of plastids of rhodophytic branch *Oleg Zverkov*
	Computational design and biological evaluation of novel HIV-1 entry inhibitors based on glycosphingolipids *Alexander Andrianov*
	NGS-SSR based biomarkers for diagnosis of human diseases *Arghavan Alisoltani*
	Detecting origins of interferons signalling sensitivity *Karol Nienałtowski*
	ARE-mediated regulatory system in glioma *Alina Astakhova*
	In silico discovery of novel fusion inhibitor scaffolds targeting a membrane proximal external region of HIV-1 gp41 *Alexander Andrianov*
	De novo design of potential HIV-1 entry inhibitors based on the click chemistry concept: a computational study *Alexander Andrianov*
	Detailing the quaternary structure of the helical virus using tritium planigraphy *Elena Bogacheva*
	Influenza virus Nuclear Export Protein (NEP) 3D structure reconstruction probed as an example for improvement of approach to the protein 3D structures prediction *Elena Bogacheva*

	Structural insights into TOM-mediated proapoptotic activation of Bax *Valery Veresov*
	MutHTP: Mutations in Human Transmembrane Proteins *M. Michael Gromiha*
	Identification of novel inhibitor of MAPKs from Leishmania donovani: Comparative in-silico analysis *Prakash Saudagar*
	Isolated chromosome sequencing for evolutionary genomics *Alexey Makunin*
	Reconstruction and analysis of the human protein-protein interaction network involved in response to tick-borne encephalitis virus infection *Elena Ignatieva*
	Reconstruction and analysis of the protein-protein interaction network involving GWAS genes associated with elevated body mass index *Elena Ignatieva*
	Proteomics analysis and mining of effector weaponries of *Cochliobolus lunatus* reveals CL[xxx]LHM-motif during colonization of potato leaf *Louis Bengyella*
	Determining the spatial chromatin organization upon desiccation process in the insect cells using Hi-C technology. *Alina Ryabova*
	Interplay between chromatin contact frequency and expression levels in *Drosophila melanogaster*, *Mus musculus* and *Homo sapiens* genomes *Margarita Samborskaya*

	Analysis of distal gene regulation based on ChIP-seq and ChIA-PET data and biophysical models of chromosome contacts *Arthur Dergilev*
	Molecular evolution analysis of genetic network related to plant trichome development *Alexey Doroshkov*
	NGS application for mutational stability monitoring of viral drug targets *Youri Kravatsky*
	Prediction of start codons and mRNA translation efficiency using RiboSeq-based weight matrices *Oxana Volkova*
	Assessment of translation efficiency from ribosome profiling and mRNA-seq data *Oxana Volkova*
	De novo identification and taxonomic analysis of human blood peptides, not being a product of known human genes *Maria Osetrova*
